

Bearings

Essential information

- A **bearing** gives the direction or position of something, or the direction of movement, relative to a fixed point. Bearings are of the form of angles, expressed in degrees as three-digit numbers; they are measured from north in a clockwise direction.

In finding bearings, say A from B, you must find the angle (measured clockwise) made by the N direction with the line from B to A.

For example, 060° , 210° .
